Description:

A vivid account of the dangers, emergencies, and doctoring on Americas most famous expedition of discovery.

Dr. Bruce Patton writes a highly readable book on the Lewis and Clark expedition zeroing in on the exposures the men and Indians had to various ailments and injuries with treatment lent by amateur physicians Lewis and Clark. Patton incorporates the various medical challenges the men faced while doing a top-notch job describing their adventure with excellent detail in this compact book. Patton describes Lewis training with the eminent physician of his time Dr. Rush in a two-week internship in Philadelphia. This brief period of medical knowledge is framed by bleeding, purging of the bowels and little knowledge of germs and sanitation. In spite of limited training, L & C do a very commendable job treating the men and Indians by also combining good common sense and knowledge of frontier treatments. Patton describes in layman terms the various injuries and illnesses that the corps were facing from venomous snakebites, frostbite, boils, abscesses, lacerations, deep wounds, gunshot wounds (Lewis) gonorrhea, syphilis (treated with mercury), dislocations and various eye injuries. The latter treated with eye water that made them mysterious and gifted shaman in the eyes of many of the west of the Rockies Indians. Clark becomes the Nez Perces favorite physician and Lewis steps aside as Clarks clinic earns supplies needed to survive the wait for the snows to melt. Patton also observes that Clark seemed to have a natural humanitarian interest in the Indians as exhibited by his concerns for the periodically ill Sacagawea and her child Pompie in contrast to Lewis less charitable concerns. Clarks more sensitive spirit may have been apparent to the Nez Perce who made him their physician of choice. Patton also offers a diagnosis of the only casualty of the expedition, Sergeant Floyd who died early in the adventure. Thought to have died by appendicitis, Patton reviews the symptoms in the journal and offers a different opinion. Limited to the description of symptoms in journals, Patton systematically offers a diagnosis of what may have been troubling the ill individuals and then analyzes the treatment. Not quite as detailed as a similar book written by another physician (Or Perish in the Attempt) the book serves as an equal companion and contrast. And actually reading both books is a joy as they do vary in areas and both are well written. Patton also offers an excellent history of the expedition that surprisingly offers noteworthy episodes not described in the book Undaunted Courage that focused more on Lewis. For example, Patton accurately describes the loss of horses by Sergeant Pryor, stolen by Crow Indians, after Pryor separated from Clark who stayed with the canoes. Patton describes how Pryor and company unexpectedly rejoins Clarks flotilla by ingeniously making bull boats, providing simple and a fast mode of transportation. A very pleasant read and Dr. Patton writes for the reader, medical layman and all, educating in a straight forward and understanding way. Well worth reading as a companion to a detailed account or if you have time for one book, you wont go wrong with Pattons book.
